

pure HD

with the push of a button

Now it's quick and easy to deliver a perfect RF distribution system without any engineering pre-design.

MediaManifold™ digitally sets individual gain and tilt for every cable run, resulting in a pure HD signal to every display in the home or facility.

Simply show up to any job site; pull standard RG6 cable up to 300 feet for each run; then, using the handheld analyzer, push the button for each output to instantly get a perfect signal at every display. What used to take days is now completed in a few hours.

The MediaManifold is a revolutionary, bidirectional high-definition distribution amplifier that combines all the elements of a professional head-end, eliminating numerous splitters, attenuators and amplifiers necessary for traditional CATV systems.

A single MediaManifold supports up to 12 zones. Increase the system size using zone expanders to enable up to 500 zones.
